DETAILED ACTION

Reason For Allowance

1. Claims 1-6 are allowed.
2. Following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1, which includes a crystal arranged in the form of a vertical cylinder, annular electrodes, an electrically conducting O-ring holder is, concentrically about each annular electrode, provided between the housing on one side and both a lateral surface of the crystal and the two annular electrodes on the other side, wherein a hardened filling compound filled the annular space.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a) Kiefer et al. discloses an electro-optic devices with acousto-optic effect suppression comprising of a crystal (figure 2, item 10), conductive layers (figure 2, item

12), a housing members (figure 2, item 22a, 22b) defining a cavity (figure 2, item 30), an enter plane (32) and exit plane (34). However, Kiefer et al. does not teach or fairly suggest a crystal arranged in the form of a vertical cylinder, annular electrodes, an electrically conducting O-ring holder is, concentrically about each annular electrode, provided between the housing on one side and both a lateral surface of the crystal and the two annular electrodes on the other side, wherein a hardened filling compound filled the annular space.

b) Bourlanoff et al. (US Patent 6,771,410 B1) discloses an nanocrystal based high-speed electro-optic modulator in figure 5 comprising of crystals (figure 5, item 150), a cladding (figure 5, item 515) surround the crystal (150), O-ring electrically conductive material (figure 5, item 520). However, Bourlandoff et al. does not teach or fairly suggest a crystal arranged in the form of a vertical cylinder, annular electrodes, an electrically conducting O-ring holder is, concentrically about each annular electrode, provided between the housing on one side and both a lateral surface of the crystal and the two annular electrodes on the other side, wherein a hardened filling compound filled the annular space.
